Overview 1

Kingwin Stryker STR-500 is here, the first ever 0dBA fan-less modular power supply with 80Plus Platinum certification. Stryker is rated 92.83% efficiency at 50% load, completely meets the U.S.A. Energy Star Standard, and is the first of its kind in the world being offered to PC consumers. This unit features a fan-less design, which lets users operate their PC under a complete zero-noise environment. Kingwin has delivered a breakthrough solution to offer a perfect balance between power, efficiency, and noise.

Not only has Stryker STR-500 achieved 80Plus Platinum certification, it also uses the single 12V rail design which provides enough power to your high end components, including your high end CPU and the latest multi GPUs configuration. Stryker STR-500 also uses a Japanese capacitor to ensure the highest quality for the power supply, solid performance for customers, and to satisfy today's high end PC power demand.
